

UAS TRAINING FROM CONSORTIQ

UAS (UNMANNED AIRCRAFT SYSTEM - OR DRONE) TECHNOLOGY IS BEING USED BY BUSINESSES AROUND THE WORLD AS A WAY TO COLLECT ESSENTIAL AND VALUABLE DATA SAFELY, EFFECTIVELY & COST-EFFICIENTLY.

UAS (unmanned aircraft system - or drone) technology is being used by businesses around the world as a way to collect essential and valuable data safely, effectively and cost-efficiently.

With a vast range of use cases in areas such as research & development, training, project management, marketing and infrastructure inspection, a UAS program can generate impressive returns in almost any industry – but only if it’s implemented correctly.

To safely and legally use these technologies in a commercial setting, you need a certain level of knowledge and technical ability.

And that’s where Consortiq can help.

We are experts in UAS training

Leading the development of the AUVSI Trusted Operator Program (TOP), Consortiq is an AUVSI TOP Level 3 Training Organization in the US, as well as a Recognised Assessment Entity (RAE) in the UK.

We’ve provided market-leading training services to thousands of people worldwide – and with our support, the incredible transformational effect of this technology on your business is easily achievable.

Our approach to training

As a market-leading training provider, we'll equip your team with the skills and knowledge needed to operate uas technology effectively and with minimal risk – allowing you to achieve your data-collection objectives sooner.

our training services are tailored to the needs of your business, too – so wherever and however you plan to implement uas technology within your organization, we'll ensure your operators are ready, confident and fully compliant with the relevant regulations.

Unrivalled credentials

We're proud to have played a central role in the evolution of the global UAS industry, and have more experience than most in our field.

Together, our training team of over 20 instructors have trained more than 1,800 candidates worldwide.

That includes:

- FAA Part 107 Aeronautical Knowledge Test preparation (US)
- CAA Permission for Commercial Operations (PfCO) course training (UK)
- AUVSI Trusted Operator Program (TOP) training (US)
- Customized platform-specific practical flight training (globally)

Consortiq recently delivered a highly custom UAS training service for Cranfield University – a university specializing in STEM and aerospace sector education.

The project saw six of our instructors training 45 candidates over five days, with both staff and students from the university obtaining CAA-approved certificates. The course incorporated flight planning elements such as aviation regulation, risk assessment and general flight principles, along with practical flight assessments to test operator competence and safety understanding.

**AN EXAMPLE
OF WHAT WE
CAN DO**

Rob Abbot, Director of Aviation Operations at Cranfield Airport, who completed the training with some of his team, said:

“Integrating UAV operations with airport activities and manned aircraft operations is going to be key in the future as we look to unleash the potential of a modernized UK airspace. This training has given myself and my team a solid understanding of UAV operations and the issues around using unmanned aircraft”

We’ve contributed to the vital development of UAS regulations over the years too, working alongside and as part of key bodies in the industry.

Current and previous partner organizations include:

- National Association of Tower Erectors (NATE) sUAS SubCommittee (US)
- American National Standards Institute (ANSI) UASSC Working Group (US)
- Pennsylvania Drone Association Training Committee (US)
- The Dept of Business, Energy and Industrial Strategy (BEIS) Drone Industry Action Group (UK)
- Oil and Gas Standards (UK)
- ARPAS-UK (The UK Drone Association)

We also have:

- ProQual Level 3 and 4 accreditation for training
- ISO 9001 certification
